Inspiration:

Conceptualized on the quirkiness and playful characteristic, Joker is designed as a vibrant entity of a space that adds fun and spontaneity. Being the wild card, Joker is meant to rise above all, yet it stays true to the space it belongs.

The overall design follows the philosophy of creating an environmentally conscious product without compromising the functional, aesthetic and practical aspects of it. The product is designed with the idea of being versatile and multifunctional, with the essence of a joker within. The table is made by interlocking multiple semi-circular modules which come together to form a balanced expression. Each unit can be designed as per the convenience of an individual, such that it allows the creation of multitude of forms and shapes, and each outcome is unique to the one who makes it.

Furthermore, the overall production process requires little use of resources, manpower and time as compared to conventional production methods. The design caters to the brief in a way that the user is allowed to restructure and reuse according to the spatial and functional requirement.

Thus, Joker stands as an epitome of abstractness and simplicity with a tinge of playful innocence.

Premium Italian Wood Finishes by
ICA PIDILITE

Manufactured by
SWATI INTERIOR

Architect
